Network coverage

Mobile operators that TIP tracking labels connect to, country by country. Every label works on 4G (LTE Cat-1), with 2G (GSM) as fallback.

200 countries and territories

453 mobile operators

382 operators with 4G LTE

360 operators with 2G GSM

Supported operators by country

Notes

4G and 2G
4G means LTE (the label modem is LTE Cat-1). 2G means GSM/GPRS. The label uses 4G where it is available and 2G as fallback.

What is not listed
TIP labels do not use 3G, LTE-M or NB-IoT, so operators that offer only those technologies are left out.

Automatic network selection
The label picks an available network in each country on its own. No SIM swap and no roaming setup.

Subject to change
Network list as of 1 October 2026, provided through TIP's global connectivity partner. Operators may add, change or switch off networks, including 2G. Service depends on local signal and frequency band availability.

Need coverage details for a specific route?
Write to us and we will check the networks along it.
